

Moath Afeef Mohammed Dafer

Network Technical | Network Cabling

Phone: +967 775200027 | Email: moathdafer2@gmail.com

PROFESSIONAL SUMMARY

Experienced Network Cabling Technician with 16 years of expertise in installing, terminating, testing, and maintaining structured cabling systems. I Skilled in Cat5e, Cat6, Cat6A, fiber optic cabling, rack installation, patch panels, cable management, and network infrastructure deployment. Proficient in troubleshooting cabling issues, interpreting network layouts, and delivering high-quality installations that comply with industry standards while ensuring reliable network

PROFESSIONAL EXPERIENCE

Network Technical Engineer

Yemen Kuwait Bank | Sana'a, Yemen | NOVEMBER 2020 – Present

- Installed, terminated, tested, and maintained structured network cabling (Cat5e, Cat6, and fiber optic).
- Installed and organized network racks, patch panels, cable management systems, and network cabinets.
- Configured and maintained network switches, routers, and wireless access points.
- Performed network troubleshooting to resolve connectivity and performance issues.
- Installed, configured, and supported IP phones, printers, and network-connected devices.
- Assisted in branch network setup, relocation, and infrastructure upgrades.
- Tested network cables using professional cable testing and certification tools.
- Maintained accurate documentation of network layouts, cabling, and equipment inventory.
- Performed preventive maintenance to ensure network reliability and minimize downtime.
- Ensured compliance with banking IT policies, security procedures, and cabling standards.
- Provided on-site technical support for network-related issues across bank branches.
- Assisted in installing and maintaining CCTV, access control, and other low-current systems when required.

Network Cabling Engineer

Smart net | Sana'a, Yemen | January 2013 – October 2020

- Executed network infrastructure projects for multiple companies, including installation and deployment of structured cabling systems.
- Installed and prepared complete network infrastructure, including Cat5e, Cat6, Cat6A, and fiber optic cabling.
- Performed cable pulling, termination, labeling, testing, and certification to ensure high-quality network connections.
- Installed network racks, patch panels, cabinets, cable trays, and organized cable management systems.
- Prepared network points, data outlets, and communication rooms according to project requirements.
- Collaborated with network engineers and technical teams during network equipment installation and commissioning.

- Troubleshoot cabling faults and connectivity issues using professional testing tools.
- Managed multiple cabling projects across different sites while ensuring quality standards and timely completion.
- Created and maintained cabling documentation, including cable labeling and port mapping.
- Ensured all installations complied with safety requirements and structured cabling standards.
